

Polyhydroxylated Indolizidines

Iminosugars are a class of critical natural products and also a group of glycomimetics with attractive biological and pharmacological activities. They play important roles in glycochemistry and glycobiology^[1]. Iminosugars are found to exhibit excellent glycosidase inhibitory activity, glycosyltransferase inhibitory activity and nucleoside phosphorylase inhibitory activity. Therefore, iminosugars have wide applications prospects in the treatment of infections, cancer, obesity, genetic disorders, metabolic disorders, and immunodeficiency disorders^[2].

Product features:

- Significant number of iminosugars.
- Various structures.
- J&K offers polyhydroxylated cyclic nitrones, which are the key intermediates to synthesize iminosugars, from grams to kilograms.
